IronMan

15-0-0 + 6Fe + 2Mn

TransPlus+

IronMan is a concentrated liquid Iron (**Fe**) and Manganese (**Mn**) product specifically formulated for foliar application to correct iron deficiency in turfgrass on greens, tees, and fairways. Iron plays a vital role in the chlorophyll process, which gives the plant its natural green color.

With the addition of **TransPlus+**, nutrient uptake and overall photosynthetic activity are enhanced, promoting improved plant health. **TransPlus+** is a biostimulant containing over 2,500 highly bioactive organic compounds that support biological diversity in the soil environment.

Benefits

- Organic chelation makes nutrients more readily available to the plant.
- Immediate effect even at low application rates.
- Manganese supports the plant during stress conditions such as drought, disease, and extreme temperatures.
- Iron supports the plant under stress and plays a critical role in chlorophyll production and photosynthesis.
- TransPlus+ enhances biodiversity and its associated benefits.

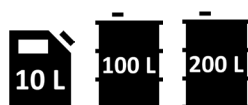

Nutrient Content

Nitrogen		
Urea	ca.	15 %
Iron	ca.	6 %
Manganese	ca.	2 %
Sulfur	ca.	2 %

Application

- Apply using spray equipment that produces a fine mist.
- Total spray volume (water + product): 300–350 L/ha.
- Do not water in. Allow at least 3 hours before irrigation.
- Apply every 7–21 days, depending on turf type and application rate.

App. rate: Green 5-10 L/ha
Other areas 5-20 L/ha
