Silica+ TP+

Description

Silica Plus+ is a concentrated liquid silica (Si) product specifically designed for soil application and for correcting silica (Si) deficiencies in plants. Silica is extremely important for plant cell strength and overall plant health, contributing to improved immune response and stress tolerance.

Silica Plus+ is compatible with many products; however, silica can be sensitive. Always add a pH-lowering product if the spray water has a high pH. If unsure, always test the mixture first using a standard jar test in a smaller container. Stir the container thoroughly before adding the product to the sprayer, as it has a high concentration of active ingredients.

Benefits

- Contributes to plant cell strength
- Strengthens plant immunity and stress tolerance
- Improved drought and heat tolerance
- Increased stress resistance
- Enhanced root development
- More upright and strong growth

Contents:

Potassium (K): 10%

Pack sizes:	10 L
	100 L

Application

Apply using spraying equipment capable of delivering a spray volume (water + products) of **600–800 litres per hectare**.

Follow the application with light irrigation

Dosage: 10–20 L/ha, every 14–21 days
